Untitled

R Cheatsheet

Load libraries

```
if (!require(testthat)) install.packages('testthat')
library(testthat)
```

Self learning

```
library("swirl")
```

Vectors

Memory management

13040 bytes

```
\begin{tabular}{ll} $\tt rm("some\_df") \# Removes \ only \ the \ object \ itself \ and \ not \ necessarily \ the \ memory \ allotted \ to \ it \ gc() \# Force \ R \ to \ release \ memory \ it \ is \ no \ longer \ using \end{tabular}
```

```
## used (Mb) gc trigger (Mb) max used (Mb)
## Ncells 485998 26.0 1057268 56.5 662594 35.4
## Vcells 898783 6.9 8388608 64.0 1802053 13.8
ls() # Lists all the objects in your current workspace
```

```
## character(0)
```

rm(list = ls()) # If you want to delete all the objects in the workspace and start with a clean slate

Apply functions

```
# https://purrr.tidyverse.org/reference/map.html
```

```
library(dplyr)
myList <- mtcars[1:20,] %>%
  split(.$cyl) %>%
  map(\sim lm(mpg \sim wt, data = .x)) %>%
  map_dfr(~ as.data.frame(t(as.matrix(coef(.)))))
Standard Evaluation (SE) vs. Non Standard Evaluation (NSE)
df[x<10] #Standard Evaluation (SE)</pre>
df[get('x')<10] #Non Standard Evaluation (NSE)</pre>
df %>% dplyr::filter(x < 10) #Standard Evaluation (SE)</pre>
df %>% dplyr::filter(!!rlang::sym("x")<10) #Non Standard Evaluation (NSE)

testthat
Prepare package
install.packages("testthat")
usethis::create_package("myPackageName")
usethis::use_test("myPackageName") # creates tests/testthat/test-mypackage.R
usethis::use_description(
 fields = list(Package = "myPackageName"),
  check_name = TRUE,
 roxygen = TRUE
usethis::use_package("zip", min_version = "1.0.0") # adds "Imports: zip (>= 1.0.0)" to DESCRiPTION file
Run tests
library(testthat)
test_that("multiplication works", {
  expect_equal(2 * 2, 4)
})
Run test coverage
library(covr)
devtools::load_all(".")
covr <- file_coverage("R/fahrenheit_to_celsius.R", "tests/testthat/test-myPackageName.R")</pre>
covr
report(covr)
Automate project setup
library(usethis)
# Create a new package ------
path <- file.path(tempdir(), "mypkg")</pre>
create_package(path)
proj_activate(path)
```

Call function multiple times

Single parameter

```
lapply(format_vec, function(f)
 write_dataset(
   dataset = mtcars,
   path = output_folder,
   format = f,
   partitioning = "cyl"
 ))
write_dataset_preset <- function(f) {</pre>
 write_dataset(
   dataset = mtcars,
   path = output_folder,
   format = f,
   partitioning = "cyl"
 )
lapply(format_vec, write_dataset_preset)
purrr::walk(format_vec, write_dataset_preset)
Multiple parameter
write_dataset_preset_multiple <- function(data, formating, partition_by=dplyr::group_vars(data)) {</pre>
 write_dataset(
   dataset = data,
   path = output_folder,
   format = formating,
   partitioning = partition_by
}
lapply(X=format_vec, FUN=write_dataset_preset_multiple, data=mtcars)
```

purrr::walk(.x=format_vec, .f=write_dataset_preset_multiple, data=mtcars)
